Student Researcher Jan. 2017 - Dec. 2017
 - Designed a machine learning infrastructure with a team of 5 students and faculty in Python using machine learning and statistical analysis libraries such as scikit-learn, numpy, pandas, and matplotlib.
 - Improved the speed of the infrastructure by 95% by adding support for parallel processing on the High Performance Cluster (HPC).
 - Researched and integrated active learning stopping methods into a machine learning infrastructure in order to reduce annotation cost within the Natural Language Processing (NLP) field.
- **Comcast** Philadelphia, PA
Software Engineering Intern Jun. 2016 - Aug. 2016
 - Increased the efficiency of the Quality Assurance team by creating a Node.js application that automatically generates unit testing reports, which can be filtered by date, device type, operating system, etc.
 - Collaborated with another intern to create a web application in C#, HTML, and Javascript that connects to an SQL database to retrieve customer session information.
